YEKTA light

INSTALLATION GUIDE

Clip Studio Paint on macOS

A floating Yekta Light window that sits on top of Clip Studio Paint. Builds for Apple Silicon and Intel Macs.

CHOOSE YOUR DOWNLOAD

Apple Silicon or Intel?

Open the Apple menu ▸ **About This Mac**. If it shows **Chip: Apple M1, M2, M3, M4…** use `YektaLight-macOS-AppleSilicon.zip`. If it shows **Processor: Intel** use `YektaLight-macOS-Intel.zip`. Requires macOS 11 Big Sur or newer.

INSTALL

Unzip, move, allow

1. Double-click the zip. Drag **Yekta Light.app** into your **Applications** folder.
2. Yekta Light is free and not yet notarized by Apple, so macOS blocks it on first launch. Open **Terminal** (Applications ▸ Utilities) and paste these two lines, pressing Return after each:

   ```
   xattr -cr "/Applications/Yekta Light.app"
   codesign --force --deep --sign - "/Applications/Yekta Light.app"
   ```

   The first line removes the “downloaded from the internet” flag; the second gives the app a local signature (built into macOS, no Apple account needed).
3. Open **Yekta Light** from Applications. If macOS still asks, go to **System Settings ▸ Privacy & Security** and click **Open Anyway**.
4. Optional: right-click its Dock icon ▸ **Options ▸ Keep in Dock**.

> You only need the Terminal step once per installed version. Updating to a newer zip means repeating it for the new app.

SCREEN COLOR PERMISSION

For the eyedropper

macOS may require **Screen Recording** permission before Clip Studio can read colors from other windows. If the screen eyedropper returns black or wrong colors, enable Clip Studio Paint in **System Settings ▸ Privacy & Security ▸ Screen Recording** and restart it.

USING IT WITH CLIP STUDIO PAINT

Getting colors into CSP

Clip Studio Paint does not allow third-party panels, so Yekta Light runs as a small window that stays on top of Clip Studio. You bring colors over in one of two ways:

"Big" palette — easy to eyedrop

1 · Screen eyedropper (recommended)

Clip Studio can pick a color from anywhere on the screen with its **Obtain screen color** command. Assign it a key once (search "Obtain screen color" in **Shortcut Settings**), then press the key and click the big swatch, the 3D form or any palette color in Yekta Light.

Turn on Big in the Light Families row to get large swatches that are easy to hit.

2 · HEX code

Every pick is copied to the clipboard as HEX (for example `#E8A58A`). Paste it wherever your color dialog accepts HEX.

Keep it on top

The Pin button in the header keeps the window above Clip Studio. Turn it off to let the window go behind.

UPDATE & REMOVE

Managing the app

- **Update:** replace the app in Applications with the new one, then repeat the Terminal step.
- **Uninstall:** drag **Yekta Light.app** to the Trash.
